

# CityFacts Census Data Series

## Aged under 15, 1961-2006

The chart shows the numbers of children in the city in 5-year age groups, with data from 10 census periods between 1961 and 2006.

This chart shows that the percentage of the population aged under 15 fell significantly from 1961 to 1981, but has fallen only slightly since then.

Although the percentage of the population in these three 5-year age groups stayed about the same, because the total population increased between 1981 and 2006 there were 14,500 more children under 15 in 2006 than in 1981.

Source of data: Census Data, Statistics Canada.

**Census Note** - from time to time definitions associated with variables are changed by Statistics Canada. Some census data derives from 20% of the population, and each census will miss some residents. Therefore data shown here should be considered as an overall indication of trends, although it is as accurate as can be provided.
