

REQUEST FOR EXPRESSIONS OF INTEREST "RFEOI" PS11187  
APPLICATIONS FOR A PUBLIC BICYCLE SYSTEM

QUESTIONS AND ANSWERS NO.3

ISSUED ON JUNE 1, 2011

Q1	Our organization's business model proposition includes 157 stations (2800 bikes stands), to be in keeping with the project to get a station every 300m. Therefore, it would mean people can find a station in not more than 150m around, which is a small distance. Besides, this case involves that it might be difficult then to find enough station spots available. So could you confirm to me that our organization well understands this scale wished by the city?
A1	Yes, the City prefers stations to be spaced at approximately 300 metres apart. The City understands that this may not always be practical and in some instances may not even be desirable, depending on the particular location. The City is looking to Applicants to provide guidance based on their expertise.
Q2	Our organization will present a project with no financial support or utility partner, given the option to the city to make him partnering with a selected-by-the-city Company. Can you confirm to me that it is possible then for him to bid? Otherwise, do you have potential Cies that he can contact?
A2	The City does not understand this question and is unable to respond.
