Subject: Memo - 2020 Metro Vancouver Homeless Count Preliminary Data

Attachments: ACCS - GM - Memo (Mayor & Council) - 2020 Homeless Count Preliminary Data with attachment (2020-08-05).pdf

Dear Mayor and Council,

Please find attached a memo from General Manager of Arts, Culture and Community Services, Sandra Singh about the preliminary results from the 2020 Metro Vancouver Homeless Count, with the accompanying preliminary report.

Key points include:

- ☐ This is preliminary high-level data, with the full report anticipated in the fall;
- ☐ The preliminary results of the 2020 Homelessness Count showed a modest increase in homelessness in Metro Vancouver, and a slight decrease in Vancouver of 128 individuals since the 2019 Vancouver only homeless count and a decrease of 43 since the last Metro Vancouver count in 2017;
- ☐ There continues to be an overrepresentation of respondents experiencing homelessness that identify as Indigenous across the region, with the majority of respondents who identify as Indigenous surveyed in Vancouver;
- ☐ The 2020 Homeless Count introduced for the first time a question that captures the racial identities of people experiencing homelessness in the region. This data will provide a basis to better understand how racialized people are impacted by homelessness. The results show that Black people are particularly overrepresented among racialized groups experiencing homelessness in Metro Vancouver, with 6% of respondents identified as Black compared to 1.2% in the Metro Vancouver general population.
- ☐ While the Count remains a key tool in tracking homelessness trends, it is important to note some factors that may have impacted the results this year. COVID-19 has had a disproportionate impact on people on low-incomes due to job losses and, despite Provincial and Federal funding supports, it is highly likely that the pandemic has created more precarious housing situations for many people.
- ☐ The Homeless Count is understood to be an undercount as some people who are experiencing homelessness do not want to participate in the survey and others remain unseen because they are staying with friends and not approached by volunteers. Stigma associated with homelessness also can impact a person's willingness to participate in the count or to be identified as experiencing homelessness.
- ☐ Council can visit <https://www.vancitycommunityfoundation.ca/initiatives/2020-homeless-count> for more information.

If you have any further questions, please contact Sandra Singh at Sandra.singh@vancouver.ca.

Best,
Sadhu

SUBJECT: 2020 Metro Vancouver Homeless Count Preliminary Data

PURPOSE

To update Mayor and Council that the preliminary data report of the 2020 Metro Vancouver Homeless Count has been publically released (attached) today, August 4, 2020¹ and to provide information on the Vancouver-specific preliminary data. The preliminary data report was prepared by BC Non-Profit Housing Association (BCNPHA) on behalf of the Community Entities leading this year's Count, Lu'ma Native Housing Society and VanCity Community Foundation. The final report is set to be released in fall 2020.

BACKGROUND

Context

Homelessness in Vancouver is a humanitarian crisis that reflects a trend seen across the region, province, country, and continent. Long thought to be an urban issue, homelessness is

¹ Preliminary results (total number of individuals experiencing homelessness) of the provincial homeless count was released to the BC communities on July 3. This did not include demographic data.

also increasing in sub-urban and rural communities. Poverty and a lack of affordable housing for those living on low incomes are two of the most significant contributors to homelessness. Traumatic personal events and serious health issues also contribute to homelessness, particularly when they intersect with individual poverty and a lack of supports. The persistence of deep poverty, without sufficient relief through government assistance, has meant some people remain homeless for years. The stark overrepresentation of Indigenous people in homelessness in Vancouver and across the country highlights the impacts of colonialism and intergenerational trauma experienced by many Indigenous peoples. Homelessness is made worse in Vancouver by the rising rents, low vacancy rates, and loss due to disrepair or displacement from renovation of Single Room Occupancy (SRO) hotels and rooming houses. Until replacement affordable, dignified housing is found, the loss of this stock, the last resort before homelessness for many people, creates a hole at the bottom end of the affordable housing spectrum. Stigma and discrimination directed towards people who are homeless, such as assumptions that the poverty keeping people from securing a home is their own fault, compound the challenge of addressing the issue through systemic efforts.

About the 2020 Metro Vancouver Homeless Count

The 2020 Homeless Count was conducted throughout Metro Vancouver on the night of March 3rd and during the day and night of March 4th. The Metro Vancouver Homeless Count is conducted every three years since 2002 (the previous regional count was in 2017). The City of Vancouver has done its own counts in the intervening years since 2010. The Homeless Count data provides important information on the number and characteristics of people experiencing homelessness in Vancouver and identifies trends compared to previous years. This is used to inform City policies on homelessness, and asks to provincial and federal levels of government on resources such as additional shelter space and social and supportive housing.

The 2020 Homeless Count used the Point-in-Time methodology, which is the same methodology used by previous City of Vancouver, Metro Vancouver regional and Provincial homeless counts to ensure comparability. The count provides a 24-hour snapshot of the minimum number of people experiencing homelessness. Due to the nature of the methodology, some people may be less likely to be included in the count such as women, youth, and those experiencing hidden homelessness, and not everyone wants to complete the survey.

It is important to note that the 2020 Homeless Count took place in the early stages of the COVID-19 outbreak in British Columbia and the City of Vancouver declared a state of emergency on March 19th. During the count period no pandemic-related restrictions were in place and the implementation process was not necessarily impacted.

DISCUSSION

Summary of Preliminary 2020 Results

Results are subject to minor changes, pending completion of the final analysis and report which is set to be released in fall 2020.

Total Number of Individuals Experiencing Homelessness

The preliminary results of the 2020 Homelessness Count showed a modest increase in homelessness in Metro Vancouver, and a slight decrease in Vancouver.

- 3,643 in the Metro Region (+29 individuals since 2017)
 - 2,605 sheltered / 1,029 unsheltered
- 2,095 in Vancouver (-43 individuals since 2017)
 - 1,548 sheltered / 547 unsheltered
 - 2,223 recorded in 2019 (-128 individuals)

While the majority of the Metro population experiencing homelessness lives in Vancouver, the Metro population experiencing homelessness has increase slightly since 2017 and Vancouver's slightly decreased over the same period.

- 58% of the surveyed in Metro Region were in Vancouver, a 1% decrease since 2017
 - Approximately 62% has been the average proportion in Vancouver since 2005
- Less than 1% increase in Metro Region since 2017
- 2% decrease in Vancouver since 2017 (-29 individuals)
 - 6% decrease since 2019 Vancouver Count (-128 individuals)

Table 1: 2020 Metro Vancouver Homeless Count: Vancouver compared to Metro Region
2005-2020 Trend (Preliminary Results)

Table 2: 2020 Metro Vancouver Homeless Count: City of Vancouver
2005-2020 Trend (Preliminary Results)

Changes in Sheltered and Unsheltered Homelessness

The proportion of sheltered and unsheltered homelessness showed slight changes since the 2017 regional count. It is important to note that changes in weather, local shelter capacity and the activation of Extreme Weather Response (EWR) shelters can affect the sheltered and unsheltered numbers from year to year. EWRs were activated on the night of the 2020 and 2017 Counts.

Unsheltered Homelessness

- 28% unsheltered homelessness in Metro Vancouver – the lowest proportion to date
 - 1,029 individuals (-3 individuals since 2017)
- 26% unsheltered homelessness in Vancouver (547 individuals)
 - 2% increase since 2017 (+10 individuals)
 - 11% decrease since 2019 (-67 individuals)

Sheltered Homelessness

- 72% sheltered homelessness in Metro Vancouver
 - 2,605 individuals (+32 individuals since 2017)
- 74% sheltered homelessness in Vancouver (1,548 individuals)
 - 3% decrease since 2017 (-53 individuals)
 - 4% decrease since 2019 (-61 individuals)

Homelessness by Indigenous Identity

There continues to be an overrepresentation of respondents experiencing homelessness that identify as Indigenous across the region, with the majority of respondents who identify as Indigenous surveyed in Vancouver.

Indigenous Profile in Metro Vancouver

- 33% (711 individuals) of respondents identified as Indigenous in Metro Vancouver – a consistent trend since 2005
- 58% of Indigenous respondents were in Vancouver (415 individuals)
 - 60% in 2017 (-33 individuals)
- 51% of Indigenous respondents in Metro Vancouver were unsheltered (compared to 28% of general population experiencing homelessness)

Homelessness by Racial Identity

The 2020 Homeless Count introduced for the first time a question that captures the racial identities of people experiencing homelessness in the region.²³ This data will provide a basis to better understand how racialized people are impacted by homelessness. The results show that Black people are particularly overrepresented among racialized groups experiencing homelessness in Metro Vancouver, with 6% of respondents identified as Black compared to 1.2% in the Metro Vancouver general population.

Racial Profile in Metro Vancouver

- 79% of respondents stated 'White' as a racial identity (1,302 individuals), followed by 6% 'Black'⁴ (98 individuals), 3% 'Asian – South' (53 individuals), and 3% 'Latin American' (52 individuals).
- 8% of respondents wrote in a response under the 'Not Listed' category (132 individuals). The majority of write-in responses referenced nationalities (87 individuals), while other responses included references to mixed or multiple racial/cultural identities (11 individuals), ethnicities or ethno-religious groups (10 individuals), and those who did not specify their racial identity beyond selecting 'not listed' (24 individuals).

Homelessness by Age

Young people are the only age group where the count results showed a decrease, continuing a decreasing trend in Metro Vancouver. The age distribution per municipality will be released in

² The 2019 Vancouver Homeless Count included a racial identity question, however there was a methodological flaw that impacted the integrity of the collected data. As a result, racial identity data was not reported.

³ The racial identity question followed the question on Indigenous identity and a skip logic question. However, responses to these questions indicated there was confusion during data collection and the skip logic was not always followed as intended. Some respondents (Indigenous and Non-Indigenous) were erroneously asked (or not asked) the racial identity question. As such, it can be assumed that the skip logic potentially skewed the results in an unknown direction.

⁴ The category of 'Black' includes respondents who selected 'Black – Caribbean and Latin American,' 'Black – African,' 'Black – Canadian/American' and 2 non-specific 'Black' responses in the 'not listed' category.

the final report; however the regional results are consistent with the 2019 Vancouver Homeless Count.

Age profile in Metro Vancouver

- 8% Youth (under 25)
 - 19% in 2017 (-185 individuals)
- 66% Adults (25-54)
 - 61% in 2017 (+16 individuals)
- 25% Seniors (55+)
 - 23% in 2017 (+9 individuals)

Homelessness by Gender Identity

The proportions of those who self-identify as men, women and non-binary in Metro Vancouver remained relatively consistent over the past two regional counts. The gender (?) distribution per municipality will be released in the final report; however the regional results are consistent with the 2019 Vancouver Homeless Count (76% men and 23% women).

Gender profile in Metro Vancouver

- 73% Male
 - 72% in 2017 (-118 individuals)
- 25% Female
 - 27% in 2017 (-85 individuals)
- 1% Non-Binary
 - 1% in 2017 (+1 individual)

Data Collection Challenges and Limitations

While the total number of individuals experiencing homelessness surveyed for the count dropped slightly (6% decrease) since last year (the 2019 Count identified 2,223 residents experiencing homelessness), many people in our city continue to struggle daily to feel safe and have their basic needs met. The PiT methodology is known to be an undercount of homelessness as some people who are experiencing homelessness do not want to participate in the survey and others remain hidden because they are staying with friends and not approached by volunteers. As the count occurs in Vancouver every year survey fatigue could also be an issue which we have heard anecdotally from volunteers. Stigma associated with homelessness also can impact a person's willingness to participate in the count or to be identified as experiencing homelessness.

COVID-19 has had a disproportionate impact on people on low-incomes due to job losses and, despite Provincial and Federal funding supports, it is highly likely that the pandemic has created more precarious housing situations for many people. It is crucial to note that as the count took place in early March, the data may no longer adequately reflect the current state of homelessness in Vancouver and the region given the economic impacts and policy responses around homelessness and housing stemming from the pandemic.

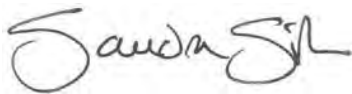

FINAL REMARKS

With more than 2,000 people experiencing homelessness in Vancouver, the Homeless Count data highlights the importance of the City continuing to partner with the provincial government to create safe, secure and affordable housing for people experiencing homelessness. These housing options include temporary measures, such as homeless shelters and navigation centres, and additional longer term options, such as the expedited creation of more supportive housing.

Many new housing and shelter supports and services were deployed in the weeks and months following count day. BC Housing announced that they have purchased three hotels in Vancouver that are being deployed to provide much-needed housing for marginalized residents. It is investment and action such as this by the provincial and federal government that is critical to address the significant shortage of housing for homeless and low-income residents in Vancouver. The City, in partnership with the province, is also preparing for a potential second wave of the COVID-19 pandemic and the provision of safe housing and shelter options, as well as additional supports such as food, is a key priority.

While the Count remains a key tool in tracking homelessness trends, data trends from the Homeless Count continue to show minimal year-to-year changes in the demographics and size of the population experiencing homelessness in Vancouver. Over the next months, staff will explore potential data collection avenues beyond the annual Homeless Count to understand the population experiencing homelessness in Vancouver. These findings will be reported back to Council in the fall.

If Council has any questions about the content of this memo or the attached report, please contact Gracen Chungath, Acting General Manager (from noon, August 5 – August 31) gracen.chungath@vancouver.ca.

2020 HOMELESS COUNT IN METRO VANCOUVER

Preliminary Data Report

Prepared by BC Non-Profit Housing Association
for Reaching Home's Community Entity for Metro Vancouver

August 2020

ACKNOWLEDGEMENTS

The 2020 Homeless Count in Metro Vancouver is a community-driven initiative of the Reaching Home Designated and Indigenous Community Entity, [Lu'ma Native Housing Society](#), in partnership with [Vancity Community Foundation](#) together with the Community Advisory Boards and the [Council of Community Homelessness Tables](#). The count was conducted by [BC Non-Profit Housing Association](#) (BCNPHA).

This project is funded in part by the Government of Canada's Reaching Home: Canada's Homelessness Strategy:

Canada

With support from:

The 2020 Homeless Count was made possible due to the ongoing and dedicated work of local Community Homelessness Tables and hundreds of volunteers across the region. Thank you!

Please contact research@bcnpha.ca with any questions, comments, or concerns regarding the information provided in this report.

ABOUT THE 2020 HOMELESS COUNT IN METRO VANCOUVER

The 2020 Homeless Count in Metro Vancouver took place on the evening of March 3rd and throughout the day on March 4th. The count provides a **24-hour snapshot of the minimum number of people experiencing homelessness in Metro Vancouver**. The purpose of the count is to estimate the number of people experiencing homelessness, obtain a demographic profile of those individuals, and identify trends compared to previous counts.

The count included **people who did not have a place of their own where they could expect to stay for more than 30 days and did not pay rent**. This includes people who:

- stayed overnight, on the night of March 3rd, in homeless shelters including transition houses for women fleeing violence and youth safe houses, people with “No Fixed Address” (NFA) staying temporarily in hospitals, jails or detox facilities;
- lived outside or stayed temporarily with others (couch-surfing) and/or those using homelessness services on March 4th.

Point-in-Time (PiT) counts have been conducted in Metro Vancouver every three years since 2002 and annually in the City of Vancouver since 2010. Decision-makers, funders and community agencies have relied on the regional count to understand trends in visible homelessness. Due to the nature of the methodology, some people may be less likely to be included in the count such as women, youth, and those experiencing hidden homelessness.

What was the same?

The 2020 Homeless Count followed the same research methodology as past years. **Information was collected through service agencies and by volunteers who were deployed on streets and in shelters to conduct interviews with people experiencing homelessness.**

Throughout the planning phase, representatives from the Reaching Home Community Advisory Boards, Community Homelessness Tables, and various municipalities provided oversight for the count methodology.

During the implementation phase, the consultants were directed and assisted by local Community Homelessness Tables, local governments such as the City of New Westminster, Richmond, Surrey and Vancouver, and homeless-serving agencies throughout the region. Sixteen local coordinators were engaged to assist with managing volunteers, liaise with local service providers and lead efforts in their respective communities on count day. Around 1,200 volunteers participated in the count by attending one of 22 formal training sessions and covering street and/or shelter shifts where they were tasked with conducting surveys to obtain demographic information from those included in the count. **Data on the number of people staying at sheltered locations was collected from shelters, jails, hospitals, detox facilities, transition and safe houses.**

For the second time since 2002 (the first being in 2017), **Extreme Weather Response (EWR)** shelters were open across the region on the night of the count (March 3rd). It is important to note that shelter providers and community partners report that those who access EWR shelters are typically more street entrenched than those who access regular shelters and would more likely be unsheltered if EWRs were

not in operation. Where possible, EWR and shelter data has been separated to account for this difference in population.

What was different?

As in past years, InFocus Consulting led the **Indigenous Homeless Count** by working in partnership with the Indigenous Homelessness Steering Committee (IHSC) and Indigenous service providers across the region. The 2020 Indigenous Count was more expansive than previous counts as it included additional communities, agencies, volunteers, and routes.

The 2020 Homeless Count introduced a question to capture the **racial identities** of people experiencing homelessness in the region. This was developed in partnership with Hogan's Alley Society and Dr. Carl James, Jean Augustine Chair in Education, Community & Diaspora at York University. This data will provide a basis to better understand how racialized groups are impacted by homelessness.

For the first time since 2002, the 2020 Homeless Count in Metro Vancouver did not use cigarettes as a means to initiate conversation with potential survey participants i.e. as "icebreakers." Instead, volunteers were trained to offer a series of items including granola bars, candy and **tobacco ties**. Tobacco ties were prepared and provided by Indigenous community partners and have been used in the City of Vancouver's homeless count in recent years in lieu of cigarettes. Previous research indicated that this shift in methodology would not significantly impact survey participations rates.

Building on lessons learned from the 2018 Youth Homeless Count in Metro Vancouver, the 2020 count included a broad **school strategy** whereby school districts across the region were included in the surveying process. Throughout February, counselors and youth workers were trained to use the survey instrument and on March 4th obtained information from youth experiencing homelessness in schools across Metro Vancouver.

The 2020 Homeless Count also included an **extended count pilot** process on the North Shore. For five additional days following the count, service providers continued to collect basic information from clients accessing services on the North Shore. The goal of the extended count was to explore alternative methods for homelessness data collection in the region. Results of the pilot will be released in the fall.

Notably, the 2020 Homeless Count took place in the early stages of the **COVID-19 outbreak** in British Columbia but prior to the provincial government declaring a state of emergency on March 18th. During the count period no pandemic-related restrictions were in place and the implementation process was not markedly impacted. However, it is crucial to note that, at the point of this report's release, the data may no longer adequately reflect the state of homelessness in the region given the economic impacts and policy responses around homelessness and housing stemming from the pandemic. Many individuals were directly affected by the outbreak and many new supports and services were deployed in the weeks and months following count day.

PRELIMINARY RESULTS

Preliminary results are subject to minor changes pending completion of the final analysis and report, which is set to be released in fall 2020.

Total Number of Individuals Experiencing Homelessness

- On March 3rd/4th 2020, 3,634 individuals were identified as experiencing homelessness in Metro Vancouver. Of those, 1,029 individuals were unsheltered and 2,605 were sheltered.
- The sheltered total (2,605 people) includes 2,172 individuals who stayed in emergency shelters across the region and an additional 192 individuals who stayed in jails, hospitals, and detox facilities.
- At least 241 individuals stayed in EWR shelter beds. Those staying in EWR beds would likely have been unsheltered if an Extreme Weather Alert had not been activated on count day.
- The unsheltered population includes 1,029 individuals who were living outside, in makeshift accommodations, in tents, in warming centres, in vehicles or staying temporarily indoors (couch-surfing).
- The largest number of individuals experiencing homelessness were counted in Vancouver (2,095), followed by Surrey (644).

Table 1. Total sheltered and unsheltered individuals experiencing homelessness by Metro Vancouver sub-region (2020)

Sub-Region	Unsheltered Total	Sheltered				Total Homeless
		EWR ¹	Shelters ²	No Fixed Address ³	Total	
Burnaby	19	8	86	11	105	124
Delta	9	3	5	0	8	17
Langley ^{4 5}	108	0	93	8	101	209
New Westminster	41	11	62	9	82	123
North Shore ⁶	46	18	53	4	75	121
Richmond	25	0	58	2	60	85
Ridge Meadows ⁷	35	12	60	7	79	114
Surrey	173	68	375	28	471	644
Tri-Cities ⁸	24	4	53	5	62	86
Vancouver	547	105	1,327	116	1,548	2,095
White Rock	2	12	0	2	14	16
Total	1,029	241	2,172	192	2,605	3,634

¹ Refers to Extreme Weather Response (EWR) shelters.

² Includes shelters (temporary nightly shelters, winter response shelters, and other shelter programs), safe houses and transition houses.

³ Includes jails, detox facilities and hospitals.

⁴ It was not possible to distinguish between EWR and regular clients.

⁵ Includes the Township of Langley and the City of Langley.

⁶ Includes the District of West Vancouver, City of North Vancouver, District of North Vancouver and Bowen Island.

⁷ Includes the City of Maple Ridge and the City of Pitt Meadows.

⁸ Includes the City of Coquitlam, City of Port Coquitlam and the City of Port Moody.

Changes in the Number of Individuals Experiencing Homelessness Since 2017

- Since 2017, the data indicates that homelessness in Metro Vancouver has overall remained stable, with only a slight increase by 29 individuals from 3,605 to 3,634 individuals.
- Five communities saw an increase in numbers of people experiencing homelessness: Burnaby (55), Surrey (42), North Shore (21), Richmond (15), and Langley (3).
- Six communities saw a decrease in homelessness: Vancouver (-43) Tri-Cities (-31), White Rock (-11), Ridge Meadows (-10), New Westminster (-10), and Delta (-2).
- The largest increase in homelessness was found in Burnaby with an increase of 80%. It should be noted that in 2019 Burnaby opened its first year-round shelter and several warming centres, which allowed volunteers to identify and count individuals experiencing homelessness who otherwise may have remained hidden.

Table 2. Changes in the number of individuals experiencing homelessness by Metro Vancouver sub-region (2005-2020)

Sub-Region	2005	2008	2011	2014	2017	2020	2017-2020 Change	
							#	%

Vancouver	1,364	1,576	1,581	1,803	2,138	2,095	-43	-2%
Unspecified	1	2	13	n/a	n/a	n/a	n/a	n/a
Total	2,174	2,660	2,650	2,777	3,605	3,634	29	<1%

Changes in Sheltered and Unsheltered Homelessness Since 2017

- At 28% (1,029 people), the proportion of unsheltered individuals was comparable to 2017 (29%, 1,032 people). As in 2017, the proportion of unsheltered to sheltered individuals may have been impacted by EWR shelters being open and any changes in shelter capacity.

Table 3. Unsheltered and sheltered homelessness in Metro Vancouver (2005-2020)

Homeless Category	2005		2008		2011		2014		2017		2020	
	#	%	#	%	#	%	#	%	#	%	#	%
Unsheltered	1,127	52%	1,574	59%	758	29%	957	34%	1,032	29%	1,029	28%
Sheltered	1,047	48%	1,086	41%	1,892	71%	1,820	66%	2,317	64%	2,364	65%
EWR									256	7%	241	7%
Total	2,174	100%	2,660	100%	2,650	100%	2,777	100%	3,605	100%	3,634	100%

Unsheltered Homelessness

The unsheltered homelessness category includes individuals who answered the count survey and indicated that on the night of March 3rd they stayed outside, such as in a makeshift shelter or tent, in a vacant building, in a vehicle, or were staying temporarily indoors (couch-surfing).

- There were 1,029 individuals living in unsheltered conditions on March 4th 2020. This represents a slight decrease from 2017 (by 3 individuals).
- The largest number of unsheltered individuals were living in Vancouver (547), Surrey (173), and Langley (108).

Table 4. Changes in unsheltered homelessness by Metro Vancouver sub-region (2017-2020)

Sub-Region	2017 Unsheltered Total	2020 Unsheltered Total	Absolute Change (2017 to 2020)
Burnaby	49	19	-30
Delta	19	9	-10
Langley	79	108	29
New Westminster	30	41	11
North Shore	11	46	35
Richmond	29	25	-4
Ridge Meadows	30	35	5
Surrey	203	173	-30
Tri-Cities	41	24	-17
Vancouver	537	547	10
White Rock	4	2	-2
Total	1,032	1,029	-3

Sheltered Homelessness

The category of sheltered homelessness includes people who stayed in emergency shelters, transition houses for women fleeing abuse, and safe houses for youth on the night of March 3rd. The sheltered category also includes people with "No Fixed Address" (NFA) who stayed in jails and health or detox facilities on the night of the count. EWR shelters are also included separately.

- A total of 2,605 individuals were identified as sheltered on the night of March 3rd 2020, which is a slight increase from 2017 (by 32 individuals or 1%).
- The majority of communities saw a decrease in sheltered homelessness compared to 2017, with the exceptions of Burnaby (85 more individuals), Surrey (72), Richmond (19) and Delta (8).

Table 5. Changes in sheltered homelessness by Metro Vancouver sub-region (2017-2020)

Sub-Region	2017 Sheltered			2020 Sheltered			Absolute Change ⁹ (2017 to 2020)
	Shelters & NFAs	EWR	Total	Shelters & NFAs	EWR	Total	
Burnaby ¹⁰	13	7	20	97	8	105	85
Delta	0	0	0	5	3	8	8
Langley	96	31	127	101	0	101	-26
New Westminster	76	27	103	71	11	82	-21
North Shore	78	11	89	57	18	75	-14
Richmond	25	16	41	60	0	60	19
Ridge Meadows	84	10	94	67	12	79	-15
Surrey	355	44	399	403	68	471	72
Tri-Cities	43	33	76	58	4	62	-14
Vancouver	1,537	64	1,601	1,443	105	1,548	-53
White Rock	10	13	23	2	12	14	-9
Total	2,317	256	2,573	2,364	241	2,605	32

⁹ It is important to note that changes in weather on the day of the count, as well as local shelter capacity, can affect these numbers from year to year.

¹⁰ Burnaby provides sleeping mats at four Warming Centres. On the night of the count, 38 adults who spent a full night at one of the centres were counted as sheltered.

Homelessness by Indigenous Identity

All survey participants are asked if they identify as First Nations (with or without status, Treaty or Non-Treaty), Métis, or Inuit and whether they have other North American Indigenous ancestry.

- In total, 711 individuals identified as Indigenous representing a slight decrease (-35) in the total number of Indigenous individuals who responded to the survey in 2017.
- Indigenous people represent one-third (33%) of people experiencing homelessness in the region. At 33%, Indigenous people continue to be heavily overrepresented when compared to the proportion of people who identify as Indigenous in the general population (which, according to the 2016 census, was 2.5%).¹¹

Table 6. Indigenous homelessness in Metro Vancouver (2008-2020)

Indigenous Identity	2008 Total Homeless		2011 Total Homeless		2014 Total Homeless		2017 Total Homeless		2020 Total Homeless	
	#	%	#	%	#	%	#	%	#	%
Indigenous	688	32%	394	27%	582	31%	746	34%	711	33%
Non-Indigenous	1,453	68%	1,074	73%	1,282	69%	1,453	66%	1,417	67%
<i>Total Respondents</i>	2,141	100%	1,468	100%	1,864	100%	2,199	100%	2,128	100%
Unsure ¹² /No Answer ¹³	519		1,182		913		1,406		1,506	
Total	2,660		2,650		2,777		3,605		3,634	

¹¹ Statistics Canada. 2018. Vancouver [Census metropolitan area], British Columbia (table). Aboriginal Population Profile. 2016 Census. Statistics Canada Catalogue no. 98-510-X2016001. Ottawa. Released July 18, 2018.

¹² In consultation with the Indigenous Homelessness Steering Committee, the Indigenous survey question was altered to include an “unsure/no answer” option.

¹³ Those 711 individuals included in the data set reflect those who participated in the survey and self-identified as Indigenous. This number is in part a reflection of the participation rate. Indigenous homelessness is more accurately expressed as a share of the total number of people experiencing homelessness. Assuming that the share of 33% is reflective of the total population, then up to 1,214 individuals who identify as Indigenous were homeless.

Indigenous Homelessness by Sub-Region

- The majority of Indigenous respondents were living in Vancouver (58%), followed by Surrey (20%).
- The majority of Indigenous respondents were living in unsheltered conditions (366 individuals or 51%). This is a higher proportion than the population of people experiencing homelessness overall (28%).¹⁴ Hence, Indigenous people are not only more likely to be homeless than non-Indigenous people, but Indigenous people also more likely to be unsheltered compared to non-Indigenous people.

Table 7. Unsheltered and sheltered Indigenous homelessness by Metro Vancouver sub-region (2020)

Sub-Region	Unsheltered Total	Sheltered Total	Total	
			#	%
Burnaby	6	13	19	3%
Delta	4	0	4	<1%
Langley	24	13	37	5%
New Westminster	12	10	22	3%
North Shore	5	15	20	3%
Richmond	4	10	14	2%
Ridge Meadows	7	15	22	3%
Surrey	70	71	141	20%
Tri-Cities	6	7	13	2%
Vancouver	227	188	415	58%
White Rock	1	3	4	<1%
Total Indigenous Survey Respondents	366	345	711	100%

¹⁴ The total share of 28% of people living unsheltered includes both Indigenous and non-Indigenous people.

Homelessness by Racial Identity

For the first time, the 2020 Homeless Count survey included a question on race, in which respondents were asked whether they identify with any racial group(s) and then were able to select one or more options from the list provided.¹⁵

- 98 respondents identified as “Black”¹⁶ (6%), 53 as “Asian – South” (3%), and 52 as “Latin American” (3%).
- Black people are particularly overrepresented among identified racialized groups experiencing homelessness; 6% of respondents identified as Black compared to 1.2%¹⁷ of the general population.¹⁸
- 132 respondents wrote in a response to the question under the “not listed” category. The majority of write-in responses referenced nationalities (87), while other responses included references to mixed or multiple racial/cultural identities (11), ethnicities or ethno-religious groups (10). Another 24 respondents did not specify their racial identity beyond selecting “not listed.”¹⁹

[Refer to Table 8 on the following page]

¹⁵ The racial identity question followed the question on Indigenous identity and a skip logic question. Responses to these questions indicated there was confusion during data collection and the skip logic was not always followed as intended. Some respondents (Indigenous and non-Indigenous) were erroneously asked (or not asked) the racial identity question. As such, it can be assumed that the skip logic potentially skewed the results in an unknown direction.

¹⁶ The category of “Black” includes respondents who selected “Black – Caribbean and Latin American,” “Black – African,” “Black – Canadian/American” and 2 non-specific “Black” responses in the “Not Listed” category.

¹⁷ The data is considered a minimum number and does not include people with multiple identities. Follow footnote 18 for more information.

¹⁸ Statistics Canada. 2017. *Vancouver [CMA]. Census Profile*. Visible minority population. 2016 Census. Statistics Canada Catalogue no. 98-316-X2016001. Ottawa. Released November 29, 2017.

¹⁹ As we continue to evolve the methodology of this question in future counts, the write-in responses will inform how the racial identity question is formulated to more accurately reflect some of the nuances from this data.

Table 8. Homelessness by racial identity in Metro Vancouver (2020)

Racial Identity (more than one response possible) ²⁰	Total	
	#	%
Arab	19	1%
Asian – East	40	2%
Asian – South-East	31	2%
Asian – South	53	3%
Asian – West	28	2%
Asian – Not specified	1	<1%
Black	98	6%
<i>Black – Caribbean and Latin American</i>	23	1%
<i>Black – African</i>	42	3%
<i>Black – Canadian/American</i>	31	2%
<i>Black – Not specified</i>	2	<1%
Latin American	52	3%
White	1,302	79%
Not Listed ²¹	132	8%
<i>Nationality</i>	87	5%
<i>Mixed, multi-racial/cultural (not specified)</i>	11	<1%
<i>Ethnicity or ethno-religious group</i>	10	<1%
<i>Not specified</i> ²²	24	<1%
<i>Total Respondents</i>	1,652	
Don't Know/No Answer	1,982	
Total	3,634	

²⁰ As respondents were able to select more than one answer, percentages may not add up to 100%.

²¹ In total, 235 individuals selected the “Not Listed” category, 216 of whom provided a write-in response. Another 26 non-responses (e.g. “animal,” “plant”) were removed from the category and a further 68 references to indigeneity were removed as these respondents were already included as Indigenous respondents. Nine “Caucasian” references were recoded to “White.”

²² This category includes 19 respondents who did not provide a write-in answer after selecting “Not Listed.”

Homelessness by Age

- A total of 54 children under 19 years of age (2%)²³ and 139 youth between 19 and 24 years (6%) were found experiencing homelessness on March 4, for a total of 193. Young people under 25 years thereby represented 8% of the homeless population in 2020 compared to 16% in 2017 and 20% in 2014. Young people are the only age group where the count results showed a reduction, continuing a decreasing trend.
- Those over age 55 continue to represent about a quarter (25%) of respondents, which is a slight increase from 23% in 2017. This continues an upward trend in homelessness among seniors.

Table 9. Changes in homelessness by age in Metro Vancouver (2011-2020)

Age Groups	2011		2014		2017		2020	
	#	%	#	%	#	%	#	%
Under 19 years	102	6%	191	9%	199	8%	54	2%
19-24 years	221	13%	219	11%	179	8%	139	6%
Youth - unknown age	74	4%	n/a	n/a	n/a	n/a	n/a	n/a
25-34 years	275	17%	332	16%	419	18%	422	19%
35-44 years	328	20%	413	20%	504	21%	508	23%
45-54 years	397	24%	512	25%	524	22%	533	24%
55-64 years	210	13%	281	14%	380	16%	380	17%
65+ years	58	3%	90	4%	176	7%	167	8%
<i>Total Respondents</i>	1,665	100%	2,038	100%	2,381	100%	2,203	100%
Don't Know/No Answer	985		739		1,224		1,431	
Total	2,650		2,777		3,605		3,634	

²³ Due to changes in the survey questionnaire we were not able to include children under 19 who were found unsheltered with their parents. This accounted for 7 children under 19 in 2017 and 9 in 2014.

Homelessness by Gender Identity

- A total of 546 individuals who answered the survey identified as women and 1,570 individuals identified as men. The proportions of those who identify as men (73%) and women (25%) remained relatively consistent with the past two counts when 72% identified as men and 27% as women.
- 42 individuals are included in the “Non-binary” category, representing 2% of survey respondents.²⁴

Table 10. Homelessness by gender identity in Metro Vancouver (2011-2020)

Gender Identity	2011		2014		2017		2020	
	#	%	#	%	#	%	#	%
Man	1,452	69%	1,419	73%	1,688	72%	1,570	73%
Woman	652	31%	527	27%	628	27%	546	25%
Non-binary ²⁵	n/a	n/a	n/a	n/a	25	1%	42	2%
Transgender ²⁶	8	0%	9	0%	n/a	n/a	n/a	n/a
<i>Total Respondents</i>	2,112	100%	1,955	100%	2,341	100%	2,158	100%
Don't Know/No Answer	538		822		1,264		1,476	
Total	2,650		2,777		3,605		3,634	

²⁴ For the 2020 data, “non-binary” includes 16 individuals who identified as “two spirit,” 10 individuals who identified as “non-binary” and 16 individuals who selected the “Not Listed” category.

²⁵ The 2017 survey options for gender identity did not include “two spirit” or “non-binary” as categories, just “man/male,” “woman/female” and “another gender identity.” The 2020 survey included “man,” “woman,” “non-binary,” “two spirit” and “not listed.”

²⁶ Information on transgender experience will be included in the final report.

Final Report

The final report is set to be released in the fall of 2020.

The report will provide additional analysis on the remaining questions included in the 2020 Homeless Count survey instrument such as: length of time experiencing homelessness, health issues, sources of income, and service usage.
