Subject: heat pump event at city hall today

Good morning Mayor and Council:

To address the City's plan to achieve 100 per cent renewable energy and zero emissions in its own City-run facilities by 2040, City Hall is now using a zero emissions air source heat pump to provide year-round climate control, improve energy efficiency, and improve building air quality for occupants. Installed at the end of 2017, the heat pump is expected to reduce greenhouse gases by 34 per cent annually and is projected to save \$20,000 each year through energy cost savings.

Today at City Hall, we will be sharing this information with the public at a media event.

Best

Sadhu
