A-2.4.1.1. (1) Combustible Waste Materials.

The accumulation of a certain amount of combustible waste material in and around buildings may be necessary for the day-to-day operation of many industrial or commercial premises. If basic measures of good housekeeping are observed, the presence of these combustibles may not constitute a fire hazard. Combustible waste material should be stored away from exits, and should only be there for the duration between garbage pick-ups. For the occupants' own safety, the materials should be stored in a manner that discourages vandals.

A-3.2.2.2. Access aisles

The purpose of this Article is to provide adequate access to the interior of the storage area for firefighting and overhaul operations. Means of egress must also be provided in accordance with Section 2.7. of this By-law. The use of dead-end aisles in storage areas should be minimized because of the potential hazard they create with respect to egress. Access aisles requires in Sentence (2) include aisles to fire department access panels, or to fire protection equipment such as sprinkler control valves, fire hose stations, portable extinguishers and fire alarm pull stations.

Sentence (4) to (8) prescribe requirements for main access in the storage area. More than one main access aisle may be required depending on the storage configuration and alternate arrangements to a single main access aisle are permitted in Sentence (7). These requirements are in addition to the general requirement for 2.4 m aisles separating individual storage areas. The width of subsidiary aisles within individual storage areas is determined by material handling needs.

Fire department access to a storage area can be by means of doors or access panels on exterior walls, or through doors from another fire compartment in the building, provided that fire compartment in turn has adequate fire department access. The access points should be as remote from each other as possible. Where feasible, the preferred arrangement is for main aisles to terminate at exterior doors on opposite sides of the building.

Chief,

Today E2 had a call for an alarm activated at 203 ABBOTT, ST. incident # 120017369

After investigating I could not find cause for the alarm and the system could not be reset

I wrote a notice of violation to have the system serviced / repaired in proper working order and maintain a 24 fire watch until the notice of violation is in compliance.

I do have a serious concern that this system is so antiquated it will not be able to be serviced properly.

Would it be possible to have one of your wardens inspect this multi dwelling?

Also, we are out of the new Notice of violations.

Thank-you ,

Sprinkler Inspection and Replacement

Sentence:

- 1) Sprinklers shall be inspected at intervals not greater than 12 months for damage, corrosion or accumulations of grease, paint or other deposits and shall be replaced where such conditions would impair the operation of the sprinkler. [See Appendix A]

Appendix:

A-6.5.4.12(1) Sprinklers.

Sprinklers in service frequently accumulate a deposit of dust, grease or other foreign material. Where these deposits are light, they often do not impair the proper operation of the sprinkler. Heavier deposits can often be removed by light cleaning methods. Where deposits cannot readily be removed, and doubt exists with respect to the effects of the contamination, a sampling of the sprinklers should be removed and forwarded to a recognized testing laboratory for an assessment of their operational characteristics to determine the necessity of replacing other sprinklers in the system.
