

## SECURE YOUR BUILDING FIRE DEPARTMENT CONNECTIONS (FDCs)

FDCs are your building's lifeline to fire prevention. When FDCs are left unsecured, they are vulnerable to damage, debris and vandalism which can constrict the flow of water to your building's fire sprinkler and standpipe systems.

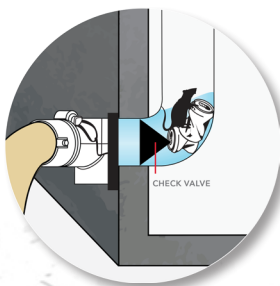

Help the Vancouver Fire & Rescue Services protect these vital fire protection systems with locking FDC / Standpipe caps to ensure these life safety devices work in a fire emergency.

### HOW DO LOCKING FDC / STANDPIPE CAPS WORK?

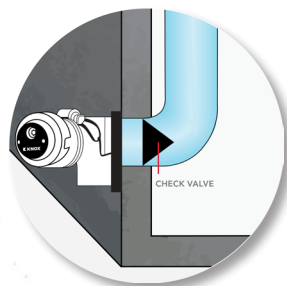

1

In the event of a fire, the Fire Department connects to the Fire Department Connection (FDC) on your building to supplement your sprinkler system.

2

Unprotected FDCs are vulnerable to debris and nesting animals that clog the pipes and prevent the flow of water.

3

Locking FDC / Standpipe caps protect these connections and keep your pipes clean, ensuring the maximum flow of water to your sprinklers.

### BENEFITS OF PROTECTING YOUR BUILDING FDCs

- Eliminates costly services to back flush the system (up to \$2,000 per back flush) or replace FDC due to debris or vandalism
- Prevents frequent cap replacement
- Protects and keeps water connection clear of debris, animals, and vandalism
- Ensures ready and reliable connections to fire sprinkler and standpipe systems
