

Active Mobility Plan - Walking Priority Areas 2023-2027

The walking priority areas identify key locations to improve walking infrastructure. This was determined by identifying areas with greater equity needs and high walking activity.

This is intended to be used with maps of missing infrastructure to supplement walking program prioritization.

The criteria used to identify the walking priority areas are: Complete Communities/Destinations (40%), Population Density (25%), Transit Proximity (20%), Disproportionately Impacted Populations (10%), and Street Network Sparseness (5%).
